56 - 26] CANADA - SEASONAL DUTIES ON FRESH FRUITS
AND VEGETABLES

Government
Publications

In the 1938 U.S.-Canada Trade agreement, Canada reserved the right to fix the value for duty on imports of fresh fruits and vegetables during the Canadian marketing season at a figure exceeding the invoice value. A dump duty was applied on the difference between the advanced value and the invoice value and, in addition, a ten per cent ad valorem duty was levied on the calculated import value. The fruits and vegetables to which this method of assessing duty applied were those of a kind grown in Canada, excluding apples and potatoes.

At the 1947 Geneva tariff negotiations the method of valuation and the ad valorem duties were eliminated and converted into straight specific duties at equivalent rates. The duty in cents per pound and the number of weeks in the Canadian marketing season when it may be applied are shown in the Canadian tariff schedule. Due to the difference in season the specific duties may be applied on a regional basis (eastern, central and western). They are applied by the Department of National Revenue on request from the industry and with concurrence of the Department of Agriculture.

Prior to April 10, 1959, the duty on all fresh fruits and vegetables except apples and potatoes was ten per cent ad valorem when the seasonal specific rates were not in effect; however, since that date the ten per cent ad valorem has been removed for certain commodities and the free rate will apply when the seasonal rates are not in effect. These commodities are: cantaloupes and muskmelons, beans (green), carrots, celery, lettuce and peppers. A duty-free period has also been set for the following commodities: pears - March 1 to June 30; plums - May 1 to June 30; strawberries - September 1 to March 31; cabbage - March 1 to April 30; cauliflower - January 1 to April 30; tomatoes - January 1 to March 31.

A duty-free period for new potatoes harvested between January 1 and June 14 and imported during that period, was in effect from April 6, 1957 to April 9, 1959. Since April 10, 1959, all table potatoes have been dutiable at the rate of $37\frac{1}{2}$ cents per hundredweight on a year round basis. Apples are also dutiable the year round at the rate of $\frac{3}{4}$ cent per pound; prior to April 10, 1959 the rate on apples was $\frac{3}{8}$ cent per pound for 42 weeks and free the remainder of the year. And also since April 10, 1959, when beans (green), beets, Brussels sprouts, carrots, cauliflower, corn on the cob, lettuce, parsnips or peas are subject to the specific rate of duty and are imported in package weighing five pounds or less, each, they shall be subject to an additional duty of five per cent.

In the attached tables are calculations of the ad valorem equivalent of seasonal specific duties on imports from the United States in the fiscal year 1966-67. To take account of the changes in the tariff schedule made in 1959, this report also includes the calculated quantities and values of fresh fruits and vegetables imported during the period free of duty and the period at ten per cent ad valorem. An attempt has been made to make separate calculations for each of the three regions, by using Dominion Bureau of Statistics' monthly import statistics by province of entry. Relevant data are included in each table. The addition of the initials "sp" after the figures showing the duration of the seasonal duty for vegetables signifies that the period of application may be split.

University of Toronto

For the purposes of the compilation it is assumed that all imports into Ontario entered east of Port Arthur; in the application of the seasonal specific duty Port Arthur and the area west in Ontario are placed with the Prairie Provinces and British Columbia.

Trade statistics are available on a monthly basis only and it is therefore sometimes necessary to make arbitrary decisions in relating the dates of application of a duty to the import statistics; if a duty is applied early in the month the whole month is taken in the calculation, if late in the month the trade statistics from the beginning of the next month are used.

Certain commodities having a separate rate of duty as well as a different period during which the duty was applied, are grouped together as one item in the Trade of Canada Imports. Therefore, it was impossible to complete the calculations for these commodities which have been foot-noted accordingly.

This bulletin is the fourteenth in a series published annually; it is for restricted distribution only. A consolidation covering the fiscal years 1953-54 to 1957-58 was published by the Economics Division in bulletin 58/23, dated September 1958.

The tables which follow were compiled by D.L. Bolton of the Economics Branch.
